SUBJECT
Lal Lal Wind Farm – Application amend Planning
Permit PL-SP/05/0461-2

Via Department of Transport and Planning –
Development Facilitation Portal

REFERENCE
0792682

ADVERTISED PLAN

Environmental Resources Management Australia Pty Ltd (ERM) has been engaged by RES Australia Pty Ltd (RES) to prepare and facilitate a planning permit amendment for the Lal Lal Wind Farm, herein referred to as “the Project”.

This report has been prepared to support an application to amend Planning Permit PL-SP/05/0461-2 (‘the existing permit’), which was issued by the Minister of Planning (‘the responsible authority’) on the 30 April 2009, pursuant to Section 97I of the *Planning and Environment Act 1987* (PE Act). Accordingly, the assessment within this report is generally limited to the sections of the permit that are proposed to be amended.

We seek to engage in a collaborative planning process to ensure a mutually desirable outcome for the site with a view to gaining the Minister of Planning support and planning approval for the proposed amendment.

This copied document to be made available

1. INTRODUCTION

1.1 BACKGROUND

The Project comprises 2,100 ha in area located on land at Elaine and Yendon within Moorabool Shire near Ballarat. The Project area is located across two sites, Elaine and Yendon located approximately 9 km apart, where 22 wind turbine generators (WTG) are located in the Elaine site and 38 WTGs are located in the Yendon site, with a combined total generation capacity of 228 MW. The wind farm has been in operation since 2022.

The existing permit was issued by the Minister for Planning on 30 April 2009 for the use and development of the land for a wind energy facility comprising a maximum of 60 wind turbines and associated infrastructure which include the construction and/or development of:

- access tracks and underground cabling
- two permanent amenities buildings
- two electrical substations
- two permanent meteorological monitoring facilities and associated equipment
- car parking and bicycle facilities
- temporary construction facilities (including an ancillary concrete batching plant)

- business identification signs
- alterations to access points to roads in a Road Zone (now referred to as Transport Zone since 2022).

1.2 PLANNING PERMIT HISTORY

The Planning Permit has been amended on three occasions under section 97I of the PE Act, with the most recent amendment approved on 12 April 2022. A summary of the permit and its amendment history is provided below:

Existing Permit PL-SP/05/0461-2

Planning Permit PL-SP/05/0461-2 was issued on the 30 April 2009. The permit allows for:

Use and development of the land for a Wind Energy Facility comprising a maximum of 60 wind turbines and their associated infrastructure and other works including: the construction of access tracks; underground cabling; two permanent amenities buildings; two electrical substations; two permanent meteorological monitoring facilities and associated equipment; car parking and bicycle facilities, temporary construction facilities (including an on-site concrete batching plant), business identification signs and alterations to access points to roads in a Road Zone.

Amendment History

On the 20 March 2017, amendment approved under section 97J to:

"increase turbine size, reduce the number of turbines, require compliance with the 2010 version of the New Zealand Noise Standard, change transformer and substation locations, revise landholder agreement conditions, and other changes."

On the 27 September 2018, amendment approved under section 97J to:

"in terms of conditions relating to proximity of turbines to roads (specifically 'Govt Road' shown on certificate of titles VOLUME 10537 FOLIO 554 and VOLUME 10514 FOLIO 928) as well as noise and shadow flicker (to ensure consistency with example conditions in the updated Policy and Planning Guidelines: Development of Wind Energy Facilities in Victoria (November 2017))."

On the 12 April 2022, amendment approved under section 97J to:

"delete condition 2(p) which relates to aviation detection lighting."

2. APPLICATION CONTEXT

The existing Planning Permit makes references to the now-repealed *Environment Protection Act 1970*, which was replaced by the *Environment Protection Act 2017* (EP Act) when it came into full effect on 1 July 2021. In addition, the *Environment Protection Amendment (Wind Turbine Noise) Regulations 2022* (the Regulations) was established to provide a dedicated regulatory framework for managing wind turbine noise. Prior to this, wind farms were regulated solely under the PE Act, with noise from wind turbines managed through conditions of planning approval.

Under the new framework which aligns with the *Wind Energy Facility Turbine Noise Technical Guideline*, responsibility for regulating operational wind turbine noise now sits with EPA Victoria. This shift aims to provide greater consistency and certainty in the approach taken to assess, monitor and manage wind turbine noise across all stages of a wind farm development.

A recent review of the existing Planning Permit conditions, undertaken with the guidance of an acoustic specialist, has identified that several conditions, particularly Conditions 23 to 27 relating to noise limits, compliance assessment, and enforcement are now outdated and duplicative. Post-construction noise management and compliance are now directly regulated under the Regulations through EPA's regulatory framework, rendering Conditions 23 to 27 of the Planning Permit redundant.

Conditions 23 to 27 of the Planning Permit and their corresponding provisions under Division 5 of Part 5.3 of the Regulations are presented in Table 2-1 below.

TABLE 2-1 COMPARISON OF PLANNING PERMIT AND THE REGULATIONS

Permit Condition	The Regulations
Condition 23 sets out the applicable noise standard (New Zealand Standard 6808:2010 Wind Farm Noise) that will apply to the Project and allows the noise limits (of 40 dB or the background noise level plus 5 dB, whichever is greater) to be waived through an agreement with the landowner. Evidence of the agreement must be provided to the Minister for Planning upon request.	Regulation 131B outlines New Zealand Standard 6808:2010 Wind Farm Noise as the relevant noise standard for wind energy facilities which prescribes a noise limit of 40 dB or the background noise level plus 5 dB, whichever is greater. Thus, the noise limits prescribed under Regulation 131B are consistent with those set out in Condition 23 of the Planning Permit. When modifying noise limits, Condition 23 requires a written agreement to be sought. This requirement is also reflected by Regulation 131A which allows an owner or operator of a wind energy facility and a relevant landowner to enter into a written agreement.
Conditions 24 and 25 require a Noise Compliance Testing Plan (NCTP) to be prepared and accompanied by a report from an accredited auditor.	Regulation 131E requires an operator of a wind energy facility to prepare and implement a noise management plan which includes procedures for assessing compliance. Regulation 131E also requires the noise management plan to be reviewed by an environmental auditor, which aligns with Conditions 24 and 25.
Condition 25 a) requires acoustic compliance reports to be prepared by a suitably qualified and experienced independent acoustic engineer to demonstrate compliance with the noise limits	Requirements of Regulation 131CA are consistent with those set out in Condition 25 a). Regulation 131CA requires assessments of wind turbine noise for the purposes of determining compliance to

specified in the New Zealand Standard 6808:2010 - Wind Farm Noise.	be conducted by a suitably qualified and experienced acoustician.
Condition 25 f) requires all complaints to be managed according to the noise complaints management plan .	Regulation 131E requires an operator of a wind energy facility to prepare and implement a noise management plan including procedures for addressing complaints.
Conditions 26 and 27 require a Noise Complaint Investigation and Response Plan (NCIRP) to be prepared as well as register and complaints response processes to be made available to the Minister for Planning.	Regulation 131F requires the operator of a wind energy facility to provide EPA Victoria, details of any complaints received and how they were addressed as an annual statement . The EPA Victoria will assess, review and initiate further action if concerns are identified.

2.1 PROPOSED AMENDMENTS

Noting several conditions are now outdated and duplicative, Table 2-2 below identifies the conditions of Planning Permit PL-SP/05/0461-2 that this application is seeking to amend.

A revised annotated Planning Permit with the proposed amendments as identified in Table 2-2 is provided in **Attachment A**.

TABLE 2-2 PROPOSED CHANGES TO PL-SP/05/0461-2

Permit Condition	Current Condition	Proposed Alterations (changes underlined in bold)
23	Except as provided below in this condition, the operation of the wind energy facility must comply with New Zealand Standard 6808:2010, Acoustics - Wind Farm Noise (the Standard) at any noise sensitive location existing as at 20 March 2017 to the satisfaction of the Minister for Planning. In determining compliance, the following requirements apply: a) The operator must ensure that at any wind speed, wind farm sound levels, determined in accordance with the Standard at noise sensitive locations (as defined in the Standard) do not exceed a noise limit of 40dB LA90, 10min or background (LA90, 10 min) plus 5dB, whichever is greater;	Amend condition to read as: The wind energy facility must comply with New Zealand Standard 6808:2010, Acoustics - Wind Farm Noise (the Standard) at any noise sensitive location existing as of 20 March 2017, to the satisfaction of the Environment Protection Authority.

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

ADVERTISED PLAN

	b) Compliance must be assessed separately for all-time and nighttime. For the purpose of this requirement, nighttime is defined as 10.00pm to 7.00am; and c) Where special audible characteristics, including tonality, impulsive sound or excessive amplitude modulation occur, the measured noise level with the identified special audible characteristics will be modified by applying a penalty of up to + 6 dB L90 in accordance with section 5.4 of the Standard. The limits specified in this condition do not apply if an agreement has been entered into with any landowner waiving the limits. Evidence of the agreement must be provided to the satisfaction of the responsible authority upon request, and be in a form that applies to the land for the life of the wind energy facility.	
24	Before the development starts, a noise compliance testing plan must be prepared by a suitably qualified acoustics expert to the satisfaction of the Minister for Planning.	Delete
25	The noise compliance testing plan must be accompanied by a report from an auditor accredited under the <i>Environment Protection Act 1970</i> with the auditor's opinion on the methodology contained in the noise compliance testing plan. When approved, the noise compliance testing plan will be endorsed by the Minister for Planning and will then form part of this permit. The use must be carried out in accordance with the noise compliance testing plan to the satisfaction of the Minister for Planning. For the purposes of determining compliance, the following requirements apply: a) Acoustic compliance reports shall be prepared by a suitably qualified and experienced independent acoustic engineer to demonstrate compliance with the noise limits specified in the Standard.	Delete This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

	b) Noise assessment positions must be located according to the Standard, and shown on a map. c) A final compliance report must be submitted to the Minister for Planning after a 12- month period following full operation of the facility. d) The final compliance report must be accompanied by a report from an auditor accredited under the <i>Environment Protection Act 1970</i> with the auditor ' s opinion on the methodology and results contained in the noise compliance testing plan. e) Compliance reports must be publicly available and published on the wind farm operator's website. f) Following facility commissioning, all complaints shall be managed following procedures set out in the noise complaints management plan.	ADVERTISED PLAN
26	For the purposes of complaints evaluation, the following requirements apply: a) Post installation sound levels shall, where practical, be measured at the same locations where the background sound levels were determined (GPS coordinates and a map showing these locations are to be provided). b) If a non-compliance with condition 23 is detected, or an acoustic investigation is required under the noise complaint investigation and response plan endorsed under condition 26, an independent assessment report must be prepared by a suitably qualified and experienced independent acoustic engineer to: • identify the weather or operational conditions associated with the complaint / breach. • analyse the uncertainty and confidence levels in the monitoring, and the steps taken to reduce uncertainty. • target assessment to identify the cause and remediation actions.	<u>Delete</u> This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

- submit a remediation plan to the satisfaction of the Minister for Planning outlining the investigation process, complainant communications, actions and timelines to resolve the complaint/breach.
- if the complaint is not resolved through the processes outlined above, the Minister for Planning may request an independent peer review at the cost of the permit holder and on/off shut down testing to resolve uncertainty.

c) Following the initial post-construction reporting process, additional independent assessment may be requested by the Minister for Planning at any time, where complaints are received and are considered to reasonably warrant investigation.

d) If investigations indicate special audible characteristics are potentially occurring, procedures outlined in Appendix B of the Standard should be applied.

**ADVERTISED
PLAN**

27

Before the first wind turbine is commissioned, the permit holder must prepare a Noise Complaint Investigation and Response Plan to the satisfaction of the Minister for Planning. The approved plan must be published on the wind farm operator's website.

The plan shall be designed in accordance with the Australian/New Zealand Standard AS/NZS I0002:2014 - *Guidelines/or complaint management in organisations* and include:

- a process of investigation to resolve a complaint.
- a requirement that all complaints will be recorded in an incidents register.
- how contact details will be communicated to the public.
- telephone number and email contact for complaints and queries.
- details of the appropriate council contact telephone number and email address (where available).
- a table outlining complaint information for each complaint received, including:

Delete

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

- the complainant's name.
- any applicable property reference number if connected to a background testing location.
- the complainant's address.
- a receipt number for each complaint which is to be communicated to the complainant.
- the time, prevailing conditions and description of the complainant's concerns including the potential incidence of special audible characteristics.
- the processes of investigation to resolve the complaint.

A report including a reference map of complaint locations, and outlining complaints, investigation and remediation actions is to be provided on an annual basis to the satisfaction of the Minister for Planning.

The register and complaints response process shall continue for the duration of the operation of the wind energy facility and must be made available to the Minister for Planning on request.

The wind energy facility operator must implement and comply with the Approved Noise Complaint, Investigation and Response Plan for the duration of the operation of the wind energy facility.

This copied document to be made available for the sole purpose of enabling its consideration and review as part of a planning process under the Planning and Environment Act 1987. The document must not be used for any purpose which may breach any copyright

**ADVERTISED
PLAN**

*The proposal does not seek to alter any other conditions of the permit.

*The numbering of conditions is to be revised accordingly.

2.2 PRE-APPLICATION ENGAGEMENT

A pre-application process has informed the proposal as it is currently presented to the Department of Transport and Planning (DTP) for this formal planning permit amendment application.

Department of Transport and Planning (Energy Assessment) – Pre-App Meeting (10 September 2025)

Following the changes to the Regulations, on 10 September 2025 and a detailed review of the relevant permit conditions, RES engaged with representatives of DTP to discuss proposed amendments to the relevant noise related conditions. The purpose of these amendments is to ensure alignment between the Planning Permit and the current Regulations.

During this discussion, it was acknowledged that the EPA Victoria are the appropriate authority to manage matters relating to wind turbine noise and are responsible for the ongoing administration and regulation of wind turbine noise. As such, any proposed changes to the relevant noise conditions on the existing planning permit will require input from EPA Victoria.

Separate to this engagement, EPA Victoria were also consulted through informal calls and correspondence and have expressed their support for the proposed permit amendment.

3. PLANING POLICY FRAMEWORK

The Planning Policy Framework (PPF) seeks to ensure that the objectives of planning in Victoria (as set out in Section 4 of the PE Act) are fostered through appropriate land use and development policies and practices.

It informs the preparation and implementation of local planning policy objectives and the introduction of zone and overlay controls, and seeks to integrate relevant environmental, cultural, social and economic factors in the interest of net community benefit and sustainable development. Those clauses most relevant to the current proposal include:

Clause 13 Environmental Risks and Amenity

Clause 13 seeks to ensure planning strengthens the resilience and safety of communities by adopting a best practice environmental management and risk management approach. Planning should identify, prevent and minimise the risk of harm to the environment, human health, and amenity by ensuring development and risk mitigation does not detrimentally interfere with important natural processes.

Specifically, pursuant to Clause 13.05-1S Noise Management, it is the objective of this policy is:

- To assist the management of noise effects on sensitive land uses.

Policy guidance within Clause 13.05-1S requires the consideration of the noise requirements in accordance with the Environment Protection Regulations under the Environment Protection Act 2017 as relevant.

Clause 19 Infrastructure

Clause 19 seeks to minimise the impact of use and development on the operation of major infrastructure of national, state and regional significance, including communication networks and energy generation and distribution systems.

Specifically, pursuant to Clause 19.01-2S Renewable Energy, it is the objective of this policy is:

- To support the provision and use of renewable energy in a manner that ensures appropriate siting and design considerations are met.

Policy guidance within Clause 1305-1S requires the consideration of *Policy and Planning Guidelines for Development of Wind Energy Facilities in Victoria* (Department of Environment, Land, Water and Planning, November 2021) as relevant.

4. PLANNING IMPLICATIONS

A consideration of the planning merits of the proposed amendment and how it responds to relevant policies and planning provisions in relation to the proposal hours is provided below particularly in relation to Clause 13.05-1S and Clause 19.01-2S.

Relevance

Conditions 23 to 27 of the Planning Permit currently impose similar obligations regarding operational noise limits, compliance assessment methodology and enforcement mechanisms which are now directly regulated by Division 5 of Part 5.3 of the Regulations.

Retaining these conditions in their current form results in regulatory duplication, creating potential confusion over enforcement responsibilities and exposing the permit holder to overlapping or inconsistent obligations.

As operational wind turbine noise is now subject to a comprehensive and standalone regulatory framework administered by EPA Victoria, it is appropriate to remove these conditions from the Planning Permit to ensure regulatory clarity and consistency.

Reasonableness

The proposed deletion of Conditions 23 to 27 is considered reasonable, as the EP Act and its associated Regulations establish a comprehensive and enforceable framework for post-construction wind turbine noise management. This framework includes defined requirements for noise limits, assessment methodologies, monitoring, and compliance – now all under the sole jurisdiction of EPA Victoria.

Retaining planning permit conditions that duplicate these legislative provisions offers no practical benefit and imposes unnecessary administrative and compliance burdens on the proponent.

A review undertaken with input from an acoustic specialist confirms that the technical intent of the existing permit conditions is fully addressed within the Regulations. Their removal would enhance regulatory clarity, avoid duplication, and align the planning permit with the current statutory and policy framework.

4.1 TITLES

A review has been conducted of the 51 titles that make up the Project land with several containing registered easement(s). These easements are unaffected by the proposed amendment. The wind farm is already constructed and operational, and the amendment relates solely to the removal of noise conditions from the existing permit. As the amendment does not alter the approved development or use of the land, the easement does not change or limit the impacts already assessed and approved under the current permit. No Section 173 agreement is recorded on any titles. The titles as described in the permit has been provided in **Attachment B and Attachment C**.

The permit lists several road closures and Crown land parcels vested in Council (e.g. Harris Road, Spread Eagle Road, Duggans Lane, etc.). These are not issued with freehold certificates of title in LANDATA. They are managed under Crown land tenure and do not have corresponding Volume/Folio references. Accordingly, we have not included title searches for these parcels, as no titles exist.

4.2 NOTICE

The application **is not** exempt from the notice requirements of Sections 52(1)(a), (b), and (d), the decision requirements of Sections 64(1), (2), and (3), and the review rights of Section 82(1) of the Planning and Environment Act 1987.

Given the purpose of the proposed amendment is to ensure consistency with current statutory responsibilities and align the existing planning permit with contemporary policy and legislative frameworks, it is submitted that the proposed changes are unlikely to result in any material detriment to adjoining properties or the broader community beyond what was previously considered.

Accordingly, it is respectfully requested that the Department exercise its discretion under Section 52(1A) of the PE Act and not require public notification of the amendment.

In the event the Department requires the public notification of the amendment, we request that this be confined to written notice to adjoining and nearby owners and occupiers, as this would constitute a proportionate approach having regard to the nature of the amendment.

5. CONCLUSION

ERM has prepared this report in support of the proposed amendment to Planning Permit PL-SP/05/0461-2 where the amendment seeks approval to modify specific permit conditions to align the existing planning permit with contemporary policy and legislative frameworks.

These legacy conditions, which seek to regulate noise separately, pose a risk of inconsistency with the new EPA framework.

No physical changes are proposed, and the amendment will not alter how wind turbine noise is managed. The Project will continue to meet its noise obligations in accordance with the EP Act and Regulations through implementation of the Project's noise management plan and NCTP.

We trust this submission meets the application requirements. Should you have any questions, please contact Emily Chung via email at Emily.chung@erm.com.

Yours sincerely,

Jenny Luk

Partner
